

Outcomes measurement for HJPs using the resources that you have

The bottom of the slide is decorated with two large, curved shapes. On the left is a solid orange shape, and on the right is a light orange shape, both with rounded edges that meet at the center.

Collect priority data for reporting

Share priority data with others

Build a shared understanding of outcomes

Reflect and review together

Advanced evaluation design, data sources

Why measure outcomes?

- Accountability to funders and stakeholders
- Learning and improving practice
- Navigating complexity (health + legal + social systems)

Immediate Outcomes

- Better identification of legal need
- Strong referral pathways
- Increased staff awareness and confidence (capability)
- Partnership relationships

Measuring Immediate Outcomes

- Referral counts, turnaround times
- Clinician surveys
- Tracking joint case meetings / training

Client Outcomes

- Legal access
- Legal resolution (e.g. income, housing, safety)
- Reduced stress / improved wellbeing
- Better engagement with healthcare

Measuring Client Outcomes

- Client surveys and interviews (sample follow-up)
- Case studies
- Mixed quantitative (numbers) and qualitative (stories) data

Reflection

- Which client outcomes would matter most to your stakeholders?

Long term and System Outcomes

- Health improvements
- Reduced health inequities
- Organisational change
- Policy / legislative impact

Challenges with Long term outcomes

- Hard to attribute to one HJP
- Require longitudinal data
- Often aspirational unless well-resourced

Making choices with existing resources

- Be proportionate
- Prioritise stakeholder needs
- Use existing data sources
- Mix numbers and stories
- Build evaluation in from the start
- Think about what is achievable within your partnership

Bringing it together

- Start with immediate outcomes
- Add client outcomes as capacity allows
- Keep systemic outcomes in the theory of change
- Build evaluation into your partnership activities
